Pipeline: Pose In Blender, export into Unreal, Render In Unreal, Paintover In Photoshop

Pose(In Blender)

KEEP SKELETON AND ANIMATION EXPORT SAME

-Sometimes needs to be an copy of the original file(Link file could cause Root Position Change)

(Run a test before posing)

-**Rig could lose bones.** Solution:

image-20250505-175530.png

(If already imported, import a new rig and replace it)

-After posed in blender, export in below format (ARP)

image-20250505-175728.png

Import and Render(In Unreal)

-Shot picture in **Editor Mode**

-For BP character, Use animation asset for both Character Mesh and Outline

image-20250505-180519.png

-Create a new camera

image-20250505-181116.png

Render & Press F9 for screenshot

image-20250518-194607.png

-Decal Light Default Angle: Z axis 170 degree

-Make other Avt Actor Hidden in Game

-Hair Physic On/Off: Change collision to Physics/NoCollision
