

Pipeline (What to Add, What to touch, and what to not)

The Pipeline of making a Narrative-driven sequence work

Examples includes:

1. Level Sequence(Controlled Camera) , Montage [Example 1](#)
2. Protagonist Swap between Gameplay&Cine
3. Character transportation setting + Lock
Cam+BlackScreen<https://haooding.atlassian.net/wiki/spaces/VTG/pages/264667138/Pipeline+What+to+Add+What+to+touch+and+what+to+not#f2>
4. Dialogue Style(Textbox)Switch
5. Free Movement Dialogue

The Pipeline

Example 1 (Include 1-4)

LS Heavy/**LockCam** Conversation with Cine player model

Pre-Check:

- If Anim Montage is needed:
 1. Is the character Gameplay Player/Cine Player? [Tag](#) is different.
 2. If not player, is the NPC [Character-based](#) or pawn-based? (Only work on Character)
 3. If Cine Player:
 - Have you applied [ABP](#) on them? (It's a must) and [Default Anim](#)?
 - Do you have pre-installed Montage playing in Level Manager? (Cause Traffic Jam)

Initialize

把 **BPLM** 当成“本关卡的引用表”，所有的get 场景内角色都通过**BPLM**而不是get actor of class

先确认CineCharacter角色的ABP里，变量**Is Cutscene**是否勾选（需要调为False来确保NMontage运作）

GameStage(If the Map is reusable)

 image-20260525-043508.png

Character Mode/Dialogue Style(PlayerBP)

 image-20260525-043314.png

DialogueNode if needed

 image-20260525-043136.png  image-20260525-043153.png  image-20260525-043725.png

对于跨多个关卡的可重复Interactable，先设置universal，然后destroy actor

Transportation(Location,Rotation) in Level Manager

(或者在对话Node里设置，见 [CineABP \(兼顾NMontage和LevelSequence, Universal For CharaNPC\)](#).)

-对于需要Narrative驱动动画的角色，使用**Set Idle Pose**。不要在LM里设置montage)

(How to set the right location and anim? Use a temporary anim asset to test)

 image-20260525-042949.png  image-20260518-030458.png  image-20260518-025329.png

Update: Use [CameraLock During Conversation](#) Instead of LS for Long Conversation

And Use NE_Cam_Release Lock when it ends

Forget all the default Montage/Sequence slot Narrative provides, we are using our own Events

(If its Duration is set to "Never"(only end when skipped), change the loop count to -1)

For Dialogue Style change, do it in node event:

In the Last Node of the conversation: Be sure to add NE event to swap back from Cine Player to Gameplay. (Or it will give double player models)

In Character

Make Sure

1. They Exist in the Stage (BPLM)
2. Do they have an icon on that you can interact with?
3. [IsCutscene](#) set to False for gameplay

Example 2

If the animation looks miserable, use Level Sequence to hide the defect

Camera locked Dialogue/Level Sequence Hybrid

Anim Montage + Existing Cam Lock+Level Sequence + BlackOutScreen+Transition to Next Level

Sequence Only consists of Camera, not Animation (Use Animation Asset as ref for location/pace, simulate to check the position)

Decide if to turn on [SeqEndsWhenNDialogueEnds](#)
