

# Teammate: Bolt

(Dialogue based on Narrative)

image-20250922-035611.png

Anchored to PlayerBlueprint, need right click to split param

## Based on AIBehaviorSystem

Move with Player, Crouch after player, Run to nearest hideout when met enemy.

Check 1.collision2.safety3.crouch4.speed with separate "Set Timer by Event Nodes"

**Find Nearest Hideout:** use "Move to Location or Actor"(Output failed or succeed)+"Find Nearest Actor" nodes.

image-20250404-203258.png

Add Change behavior before to give it time to reset.

**On Found Target:** Would find all actor child of BP\_AI\_Base

image-20250404-202905.png

For boss event BP:

Add an on Boss event played and set Enemy Nearby to true. Place the hideout actor in the corner.

## Troubleshooting:

### AI Behavior Debug

-Check **AI controller class:** Do they belong with the parent BP?

-Check **Behavior Tree:** Is it loaded in Character BP?

-In Behavior Tree, run the game and find the debug controller AI: Is it flowing through desired behavior

### AI Animation Issue

-No animation on AI: Check ABP

(Is it getting speed and velocity? Is the character actor valid?)

image-20250404-042832.png

-Check StateMachine: Is state transisting?

-Check CharacterBP: Did you pause anim?

-Rotation Issue: Is the character same direction with the arrow/parent BP?

Notice that Unreal may have things running good even when it can't, and broke after you reopen the project. Would need to rewrite stuff in other way if that happens

Troubleshoot: Set Timer By Event does not fire. Solution: Merge some events into the same timer (Too many timers in one blueprint)
