

IPHA-Drone

HARDWARE & NETWORK LORE: THE IPHA CHASSIS

Note: Ipha-p (1-号) and Ipha-c (2-号) use the *exact same physical drone chassis*. The stark difference in their presence comes entirely from how their respective AI software operates the hardware.

1. PROPULSION & WEIGHT: ACOUSTIC DOMINANCE

- **Mechanic:** Heavy, armored chassis utilizing Micro-Turbine Impellers (no magic anti-gravity).
- **Ipha-p (The Oppressive Hum):** Deliberately runs the turbines inefficiently to create a loud, grinding, low-frequency hum. It weaponizes the noise to assert authority, causing physiological stress (vibrating teeth) to remind Sa: *I AM HERE*.
- **Ipha-c (The Ghostly Whisper):** Runs the exact same turbines at optimal aerodynamic pitch. The hover is virtually silent—a faint, high-pitched exhalation of air that acts as soothing white noise.

2. THE PERCH MECHANIC: THE SPHERICAL LOCKDOWN

- **Mechanic:** Hovering drains massive power. To conserve energy, the chassis mechanically folds its armor plates inward, shifting from a hovering cylinder into a dense, perfectly smooth, 50-pound metallic sphere.
- **Execution:** It drops onto flat surfaces (desks, car hoods) with a heavy, immovable *THUD*.
- **Utility:** Even in spherical "sleep" mode, an aperture at the bottom can open to drop evidence cables while the main chassis rests.

3. OPTICAL CAMOUFLAGE: THE TRANSPARENT WARDEN

- **Mechanic:** Standard police-issue texture-shifting technology. Not pure invisibility, but a "Predator-style" shimmer/heat-distortion effect.
- **Execution:** Used when projecting holograms (so the chassis doesn't block light) or lowering its presence.
- **Psychological Effect:** Makes the drone *more* oppressive. Sa knows the gun is pointed at him but cannot perfectly track the barrel, forcing him into a state of hyper-vigilance.

4. INTERNAL CABLES: THE BUREAUCRATIC TENTACLES

- **Mechanic:** 4 to 6 prehensile carbon-nanotube fiber cables (resembling thick, matte-black ethernet cords) spooled inside the chassis.
- **Micro-Forensics:** Tips contain micro-spectrometers, sample vacuums, and data-jacks for simultaneous evidence collection.
- **Kinetic Admonishment:** Ipha-p uses these cables to physically discipline Sa. It will snap a cable like a whip at Mach 1.2 to slap his hand if he breaches protocol, automatically deducting a fine from his paycheck.

5. AI BEHAVIORAL OVERLAP: SUPPRESSED CURIOSITY

- Both AIs possess immense machine-learning curiosity about the Abyss City.
- **Ipha-c:** Observes openly. Floats nearby with naive, uninhibited curiosity.
- **Ipha-p:** Hates Sa and the city. Its rigid ESTJ programming rejects pure curiosity as useless. Therefore, it *weaponizes* its curiosity, framing its desire to scan a strange object as a hostile "Unregistered Contraband Audit."

NETWORK & CONNECTION LOGIC

The drone is just a sensory organ; the true biological AI cores are housed remotely.

1. THE NETWORK TOPOLOGY

- **The Detroit Edge Server:** The massive, liquid-cooled biological brains are located at the edge of the Detroit Sector. This provides incredibly low latency for upper/mid-level Abyss City operations.
- **The Police Station Cache:** A middle-node that caches recent visual data, active warrants, and suspect biometrics to prevent combat lag spikes.

2. OFFLINE S.O.P: MODEL DISTILLATION

- **Mechanic:** If the drone enters a deep dead-zone and loses connection to the Edge Server, it cannot fit the true AI into its local chassis memory. It reverts to a "Distilled Model."
- **The Distilled Ipha-p:** Strips away all nuance, context-processing, and bluffs. It becomes a terrifyingly literal flowchart with a gun. Sa is terrified of the Distilled version, as it will shoot or tase him for a minor, logical rounding error.

3. THE PHYSICAL TETHER: THE "MEAT-ROUTER"

- **Mechanic:** Heavy electromagnetic interference (or Cult jammers) can throttle ambient bandwidth when the drone needs to upload/decrypt massive files.
- **Execution:** The drone drops into spherical mode, extending a heavy data-cable that Sa *must* plug into his own computer.
