

Scars

粉色部分 = 接触性烧伤后的增生性/萎缩性混合瘢痕

“那片不是没皮了，是当年贴着烧红的钢板烙出来的。医生说毛囊没全死，所以现在还能长出几根歪七扭八的头发。”

ART DIRECTION NOTE: Sa's Scar & Trauma Map

The Canvas (Skin Tone & Base Texture): Sa's skin is not a clean, pale canvas. As an Ainu/Southeast Asian mix trapped in the sunless Abyss City, his skin is a sallow, dark olive—described as "**Rusted Brass**." It is slightly translucent from asylum wasting, layered over with the lacy, purple-blue mottling of **Cutis Marmorata** (due to poor circulation from the artificial heart). Scars on this skin look jagged, dark, and highly contrasted.

1. Surgical Intervention: The "Zipper"

- **Location:** Dead center down his sternum (chest).
- **Appearance:** A thick, vertical surgical line. It is slightly keloid (raised), discolored, and brutalist in execution.
- **Lore:** The entry point for the installation of his artificial heart ("The Governor"). Visually, it acts as a harsh centerline splitting the lacy purple *Cutis Marmorata* webbing on his ribs.

2. Epidermal Trauma: The "Blast Shadow" (Carbon Tattooing)

- **Location:** Asymmetrical—covering the left side of his jaw, left neck, and left shoulder.
- **Appearance:** Shrapnel peppering. A cluster of dark blue-grey "pecks" and micro-scars. The skin here feels like 400-grit sandpaper. It looks like deep, permanent dark freckles because non-biological inert matter is trapped under the dermis.
- **Lore:** A permanent record of a near-miss explosion that drove high-velocity debris (metal shavings, concrete grit, unburnt propellant) into his skin.
- *Behavioral Note:* During high-tension "Revs" spikes, these spots inflame and itch, causing Sa to absentmindedly claw at his neck.

3. Chemical Trauma: "Rebound" Striae (Stretch Marks)

- **Location:** Clustered around the armpits, the lateral edges of his pectorals, and stretching across his lower back.
- **Appearance:** Angry, jagged silver and red stretch marks cutting into the skin.
- **Lore:** Visual proof of his "Glass Cannon" anatomy. After 3 years of muscle atrophy in the asylum, his body was chemically forced into "Rebound Hypertrophy." His muscles grew back too fast for his skin to adapt, literally tearing the dermis.

4. Neck, Joint Scar

- **Location:** Somewhere highly visible on his neck and joints (near the shrapnel peppering).
- **Appearance:** Deep, jagged, and described as a "disgusting old scar".
- Cause by straight jacket bounding

5. General Attrition: "The Rat's Coat"

- **Location:** Hands, forearms, knees, and knuckles.
- **Appearance:** A layered, overlapping map of minor nicks, burn marks, and scraped knuckles.
- **Lore:** He is the "kinetic lever" for Ipha-2. Because he is constantly getting thrown into industrial pipes, breaking into secure zones, or taking the physical recoil of heavy-duty/hacked weapons (like the pneumatic bolt pistol), his extremities are permanently weathered.

Summary for Artists/Writers: Do not draw Sa with clean, heroic battle scars. His scars should look like **industrial wear-and-tear on an overworked machine**. They are a mix of rushed surgeries, structural failures, and blunt-force street trauma.
