

Animation Ex/Import/Retarget/IK

in Blender, go to your Scene Properties, and under Units, **change the Unit Scale from 1.00 to 0.01.**

Troubleshooting: Blender Version Problem/ARP Version

-**DO NOT CLICK** "Update Rig" for older rigs (Mei/Bolt)

-**ARP export issue fix:** 1.Remove **Voxel Heat Plugin**

2.Uninstall ARP, Reinstall, and Restart Project (For each project)

-**ONLY USE Blender 4.0**

Default Export:(Same for Rig and Animation)

image-20250512-151346.png

(*100 When import into Unreal)

Troubleshoot: Rig lose bone?

See [Avatar](#)

ARP base:

image-20250512-045135.png

-check "Force Root Lock" on your source animation before retargeting in Skeleton Tree editor

ROOT / PELVIS = Animation ALL OTHERS = Skeleton -Weird Swing? Turn off IK

--ImportMayRigAnim:export in 1 scale from Blender with default, import into unreal with 15 scale

-Fix Anm Scale issue after importing: Check everything under root

-Play in reverse: add - in rate scale (edited)

-StarSpine:rig file的fbx导出骨骼和animation不兼容，直接从animation栏里导出

For Character Static Mesh, make sure z position is set to 0 before importing(Unreal multiply the offset scale by 100)

After import, check Physic assets to see if collision is too big

In retargeter, make sure to check IK/FK influence\

image-20250119-021944.png image-20250825-044346.png

Rotation needs to match on both side

Ctrl+R Click: drag simulation

image-20250825-043538.png

Physics Body snapping to root trouppleshoot:

Solution found: Create 2 connected "root" bones. Physic type of the first set to kinematic, second - to simulated, and lock all angular limits on constraint of the second. Then add "branches".

-Chain Physics Glitch

checkbox smooth collision in advanced setting

(Set the snapping bones to Kinematic to test if the child snaps to the root. If so set the root simulated and lock all axis)

Retarget

IK FK

Use Exact for Chain Mapping Matching

In IKR

(Disable Full IK in IK_Character)

In Global Setting(Right upper corner)

Pelvis-Absolute

image-20250117-231322.png

Root Bone Motion Fix

In IKR

(For May, May-Quinn has root issue so it can not be used for animation with pelvis shift)

image-20250118-030459.png

ABP

BlendSpace(Create a new one from character rig)

Maximo:

> Import into Blender, Add Rootbone

> X Forward Z up export, 10 scale import into Unreal

> Axis should be good
